Instant Use of Mailit 7 in Exchange for Mailit 6 in FileMaker Solutions

Please notice that none of the code changes described below are critical while employing Mailit 6 in exchange for Mailit 6 in a FileMaker solution.

Any programming time invested leads to direct improvements of your FileMaker solution by leveraging new Mailit 6 features. Your migration effort is minimized close to zero!

General recommendations:

- `"Emai_Version"` : Update if necessary (Mailit 7 function call will return the major version based on "7").

Utilization of Mailit 6 message download history after Mailit 7 upgrade:

- Mailit 7 maintains it's own POP3 messages download history file. In order to utilize the message history file that were generated by Mailit 6, the following files should be copied:

Windows:
c:\Documents and Settings\<User Name> \Application Data\net.dacons.mail.it \mailit.6.uidl

Mac OS X:
/Users/<User Name>/Library/Preferences/net.dacons.mailit/mailit.6.uidl

Into the following location:

Windows:
c:\Documents and Settings\<User Name> \Application Data\net.dacons.mailit \mailit.7.uidl

Mac OS X:
/Users/<User Name>/Library/Preferences/net.dacons.mailit/mailit.7.uidl
