Personal Mail for Mailit 7

Welcome to the Personal Mail solution for Mailit 7

The Personal Mail solution with the FileMaker plug-in Mailit 7 enables you to send and receive email directly from FileMaker. No external email application needed.

The Personal Mail solution is open source and can be freely modified by license holders of Mailit.

This solution shows common feature of regular email clients like folder and rule management, email account management, contact management. You can send, receive and manage attachments and much more.

Before opening the Personal Mail solution make sure that the Mailit plug-in is installed in the FileMaker Extensions folder and that you have at least one set of email account data handy.

If you are unsure about the IMAP/POP/SMTP server, user name and password, check with your regular email client for those or contact your ISP.

Attention users of Mailit 4: *when using IMAP account, this example solution will synchronize the folders content, unlike the Mailit 4 Personal Mail, which would only download messages. This means that if you delete a message in "Personal Mail", this message will be also deleted in your IMAP server folder.*
